

Medinexus Patient Access

Empower your patients
and improve patient loyalty

Available through

Empower your patients and improve patient loyalty

Provide your patients with the ability to securely view and share their diagnostic reports and images via their mobile device or desktop computer.

Patient Access, as part of the Medinexus solution, allows radiologists to leverage mobile and web technology to provide patients with greater convenience and in turn boost loyalty and the chance of referral and recommendation.

With Patient Access you can:

Provide patients with the ability to view and share their diagnostic reports and images with health care providers outside of your network

Provide patients with the ability to request an appointment from their mobile

Customise the mobile app and web portal with your practice branding

Enhance your service offering to patients and encourage loyalty and referrals

Be confident your data is secure – all data is encrypted at rest and in transit, with no medical data stored on devices

Safe and secure access to view and share results and images

Patient Access allows patients to share reports and images with other healthcare practitioners empowering them to manage their own health records. In addition, Patient Access helps reduce the time and money spent on staff and resources providing copies of results to providers subsequently involved in the patient's care.

Available for download on iOS and Android devices and accessible on any web browser, Patient Access utilises encryption technology and is password protected to ensure images and results remain secure.
