

MEDINEXUS

Simpler, smarter, better delivery
of diagnostic results

SIMPLER, SMARTER, BETTER DELIVERY OF DIAGNOSTIC RESULTS

Medinexus: a superior results delivery service for diagnostic reports and images that sets you apart from your competitors.

Medinexus is a unique, time-saving delivery service that presents your reports alongside your images and PDFs inside the patient's record in your referrer's clinical system. You can brand reports with your company logo creating a powerful opportunity to promote your business.

Give your referrers a complete view

When you send your results through Medinexus, practitioners don't waste valuable time logging into a separate system. Your branded report and images either appear automatically within their clinical system or can be accessed with a single mouse click, depending on the software they use. Diagnosis and decision-making are streamlined, and if practitioners want to review every image in a CT or MRI then it's just one more click for a full DICOM view of the study with the associated tools one expects in a DICOM viewer – all without logging in. We can even integrate your own PACS viewer directly into the referrer's clinical system. Tools within the clinical system allow the referrer to forward the report and images to other practitioners, as well as view reports and images from you when they were not the original referrer.

Designed for busy medical professionals and patients

Specialists on the go can easily view reports and images via a web browser and apps for tablets and smartphones as they travel between locations. Patients can also securely access their reports and images via web browser or apps for their mobile devices, to allow them to easily share their results with other healthcare professionals at consultations. Your reports and images are conveniently stored online, making it easy for other medical professionals to view and print if patients move interstate or need further care.

An affordable managed service

Medinexus is all about practicality and convenience. Which means you don't have to worry about the technology, updates, security or network. Simply subscribe to the service and start using it to send your images and reports. It's all branded as your own. You'll be charged a small upfront fee for installation, after which you'll be billed monthly for usage, which usually costs less than a postage stamp per transaction, and reduces with increased volume. Medinexus provides the best possible opportunity to reduce your hard copy production costs.

A proven solution with hundreds of reference sites

Over 200 radiology and pathology facilities, optometric clinics and public hospitals already trust Medinexus to transmit their reports, images and PDFs in a practical, secure and convenient way. As a result, over 30,000 practitioners across Australia use Medinexus, as well as thousands of patients who access reports and images on demand.

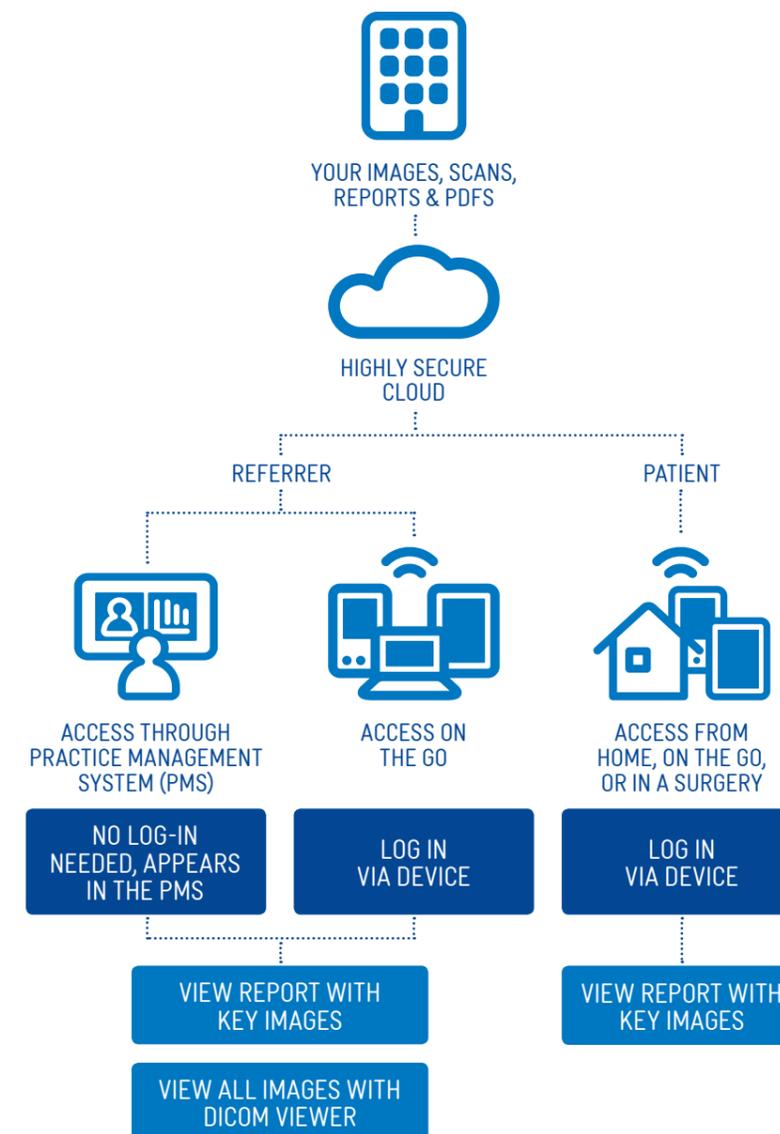

Highly compatible and flexible

What sets Medinexus apart is its compatibility. It works with HL7 based reports and operates seamlessly within standard clinical systems including: Medical Director, Best Practice, Genie, Medtech 32, Shexie, Audit4, CCOS, Medinet, Profile, Total Care and many more. This means referrers can access records directly from their clinical system without having to log into a separate system. It also integrates with any industry standard PACS and RIS, helping referrers easily incorporate images and diagnostics to provide a complete patient record. Medinexus can be fully integrated with HealthLink, Argus and Medical Objects and the service is jointly delivered by them. Plus there are powerful apps that let practitioners view it all on their tablets and smartphones.

Data integrity, security and privacy

Privacy of patient data is paramount. We conform to privacy principles at state and federal levels. All our processes are designed to ensure the privacy of patient information. Your information is all stored in our highly secure Sydney data centre under local jurisdiction, manned 24/7 with proactive monitoring, and fire detection and prevention. The Medinexus system itself is protected by a business-grade firewall and all data transmitted across the Internet is encrypted using 128Bit SSL encryption. Cryptographic algorithms are designed to detect any changes to digitally signed documents and images, instantly repudiating suspect files so that they are no longer available for viewing.

MEDINEXUS

GET THE MEDINEXUS ADVANTAGE

1 BE A STAND-OUT PROVIDER

Stand out in a sea of competitors by offering a superior online results delivery service with online tools that help medical professionals work the way they want to work quickly and efficiently.

2 NO TECHNOLOGY TO MANAGE

No need to worry about technology, updates, networks or security, Medinexus is managed end-to-end by us. Simply subscribe and we'll take care of the rest.

3 ALL IN A SECURE AUSSIE CLOUD

Your images and reports are secured in an Australian cloud so your referral network has reliable, high-speed access to them. Automated off-site back-ups keep everything duplicated and safe.

4 INDUSTRY STANDARDS

Medinexus supports both HL7 and DICOM standards. It integrates with any industry standard RIS and PACS. Compatible with standard referrer clinical systems including Best Practice and Medical Director, Genie, and many more.

5 EASY AND AFFORDABLE

We can have you up and running quickly, with low upfront charges. Then each month simply pay for use, with your bill calculated to match the number of reports you send. It's that easy.

6 WORKS ON MANY DEVICES

Referrers and patients can view images and reports in all leading browsers on both Apple and Windows systems. Apps are also available for Apple iOS and Android mobile devices. No separate login required.

7 HIGH AVAILABILITY

24/7 monitoring and fire prevention protects your data. Dual power feeds from independent grids, with battery backup and diesel generators ensure 24/7 availability.

8 ENTERPRISE-GRADE SECURITY

An enterprise-grade firewall with redundant internet maintains connectivity. Plus automated backup ensures rapid restoration in the unlikely event of system failure.

ABOUT TELSTRA HEALTH

Telstra Health is a leading provider of eHealth solutions, creating a better health system for patients, providers and funders. We are the partner of choice in the health industry, working with the system to connect patients, healthcare workers, hospitals, pharmacies, government and health funds and build a safer, more convenient way of managing health.

Our role is in integrating eHealth solutions across all care settings to solve industry challenges - connecting patients to doctors, doctors to other providers, and accessing care and information where you want, when you want.

To bring this vision to life we draw together significant investment and an experienced healthcare team to work with government and professional bodies with the knowledge and expertise to understand Australia's health system. We also draw on Telstra's experience in working in complex enterprises and bringing together fragmented solution providers. We understand the challenge of implementing and integrating new systems.

We've built technical capabilities to connect the health system, delivering leading platforms for GP, hospital, radiology, pathology, quality assurance, telemedicine, pharmacy, aged and community care and health messaging.

Telstra Health is a business division of Telstra Corporation, Australia's leading telecommunication company.
